

Top results and mine construction

Gold remains in demand! And this TOP company is ushering in a new era among gold projects!

When you hear British Columbia, you inevitably think of the Stikinia region in northwestern Canada and, above all, the Golden Triangle. And not for nothing!

Dear readers,

According to a recent study by global auditors Ernst and Young, a whopping 70% of all investments in gold and silver projects in the entire province of British Columbia were made in the Golden Triangle in 2023. Spending on gold projects alone amounted to a whopping CAD 230 million in 2023.

Tudor Gold (WKN: A3D078) and its Treaty Creek power project are at the forefront of Ernst and Young's analysis of the currently most significant precious metal projects in this very area.

- Advertisement - Note conflicts of interest and disclaimer - Advertorial/Advertising -

In addition to copper, BC is host to a number of other critical metals. The table below lists notable critical metals projects in the province.

Notable critical metals projects

Northwest

Galore Creek - Galore Creek Mining Corp. (Copper)
Kitsault - New Moly LLC (Molybdenum)
KSM - Seabridge Gold Inc. (Copper)
Kutcho - Kutcho Copper Corp. (Copper, Zinc)
Red Chris (East Ridge) - Newmont Corporation (Copper)
Schaft Creek - Teck Resources Limited (Copper)
Turnagain - Giga Metals Corporation (Nickel)

North Central

Akie - ZincX Resources Corp. (Zinc)
Aley - Taseko Mines Limited (Niobium)
Decar Nickel District/Baptiste - FPX Nickel Corp. (Nickel)
Kemess Underground - Centerra Gold Inc. (Copper)
Kwanika/Stardust - NorthWest Copper corp. (Copper)
Wicheeda - Defense Metals Corp. (REE)

South Central

Ajax - KGHM Ajax Mining Inc. (Copper)
New Prosperity - Taseko Mines Limited (Copper)
Ruddock Creek - Ruddock Creek Mining Corporation (Zinc)
Yellowhead - Taseko Mines Limited (Copper)

Southeast

Bull River - Canadian Critical Minerals Inc. (Copper)

Southwest

North Island - Northisle Copper and Gold Inc. (Copper)

Source: EY "BC Mineral and Coal Exploration Survey 2023"

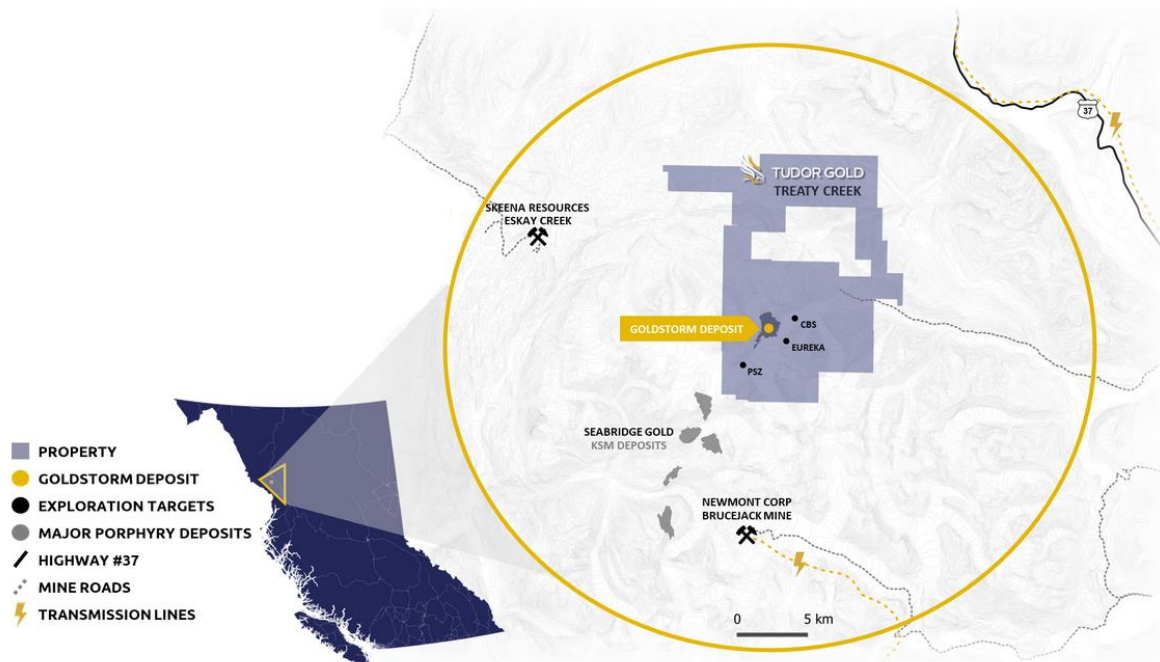

This prominent placement impressively underlines the superlative potential that **Tudor Gold's (WKN: A3D078)** portfolio gem holds within and beneath it.

Goldstorm': A heavyweight among Canadian gold deposits!

TUDOR GOLD

The Goldstorm deposit is already one of the biggest discoveries of the last 30 years!

Source: Tudor Gold

After updating the mineral resource estimate in April of this year, the bottom line for Goldstorm was a phenomenal 27.87 million ounces of gold equivalent (AgEq) at a terrific 1.19 g/t in the indicated category, consisting of 21.66 million ounces of gold at an outstanding 0.92 g/t Ag and 2.87 billion pounds of copper at 0.18% Cu,

Compared to the estimate of almost exactly one year ago, this represents a phenomenal 19% increase of almost exactly one-fifth in terms of gold equivalent ounces and an increase of 16%, 14% and 32% in terms of gold, silver and copper recoveries, respectively.

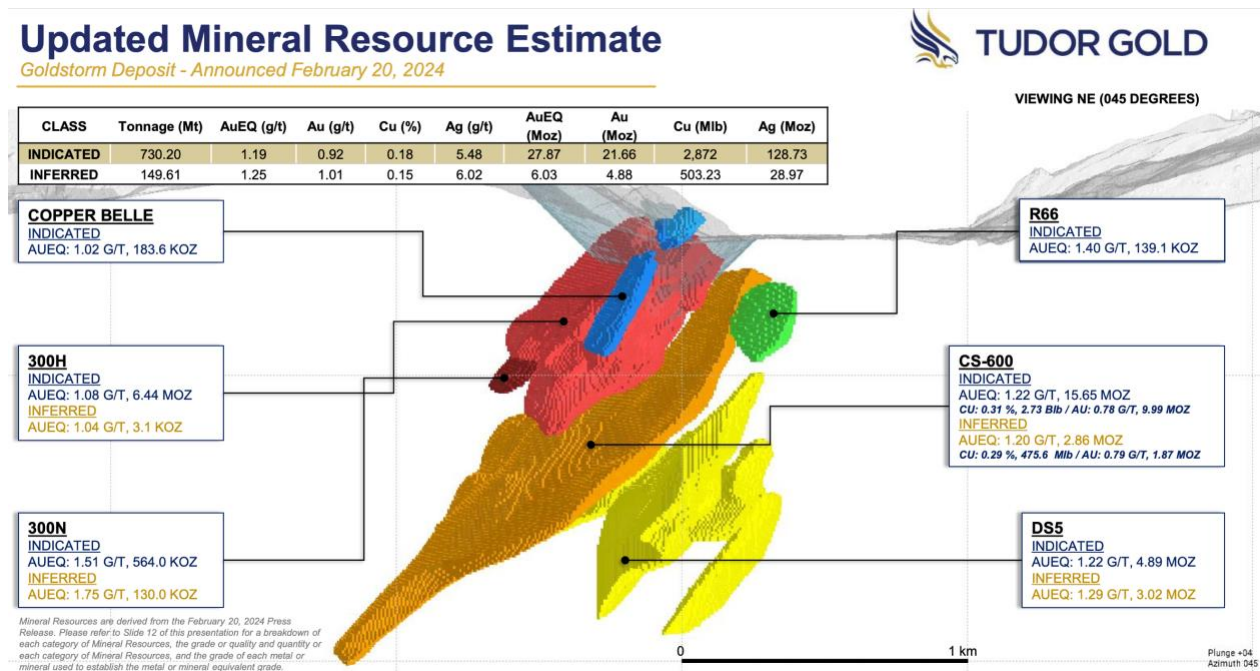

Tudor Gold Corp. (WKN: A3D078) is thus putting a highly visible exclamation mark behind the incredible potential of its Power project and turning the proverbial "perfect storm" into an irresistible, substantial whirlwind that is pulling the gold market into its wake.

In addition to the abundant resources, Goldstorm also has first-class infrastructure. At 20 km, the project is just a "nugget" throw away from a very well-developed road that can be used to drive heavy exploration equipment all year round. In addition, running water is available all year round for exploration purposes and future mining and processing requirements. Goldstorm is also perfectly connected in terms of power supply and access to major transportation routes (including the deep water port facilities at Stewart for the export of mineral concentrates).

Multiple high-grade targets in the exploration sights!

Goldstorm's resource represents a very large, structurally controlled gold-silver-copper porphyry mineralized system that can be further expanded through drilling. Furthermore, the outstanding potential of this record-breaking deposit can be increased by additional fat ounces. **Tudor Gold's (WKN: A3D078)** rich Treaty Creek project includes other high-grade zones such as Eureka, Calm Before the Storm (CBS) and Perfectstorm. Tudor has pinned these promising areas at the top of its exploration drilling program agenda of early to advanced stage targets.

In the medium to long term, this will be followed by the exploration of those targets in particular that are located at the boundaries of the 300 Horizon, CS-600 and DS-5 domains within the exceptional Goldstorm phenomenon.

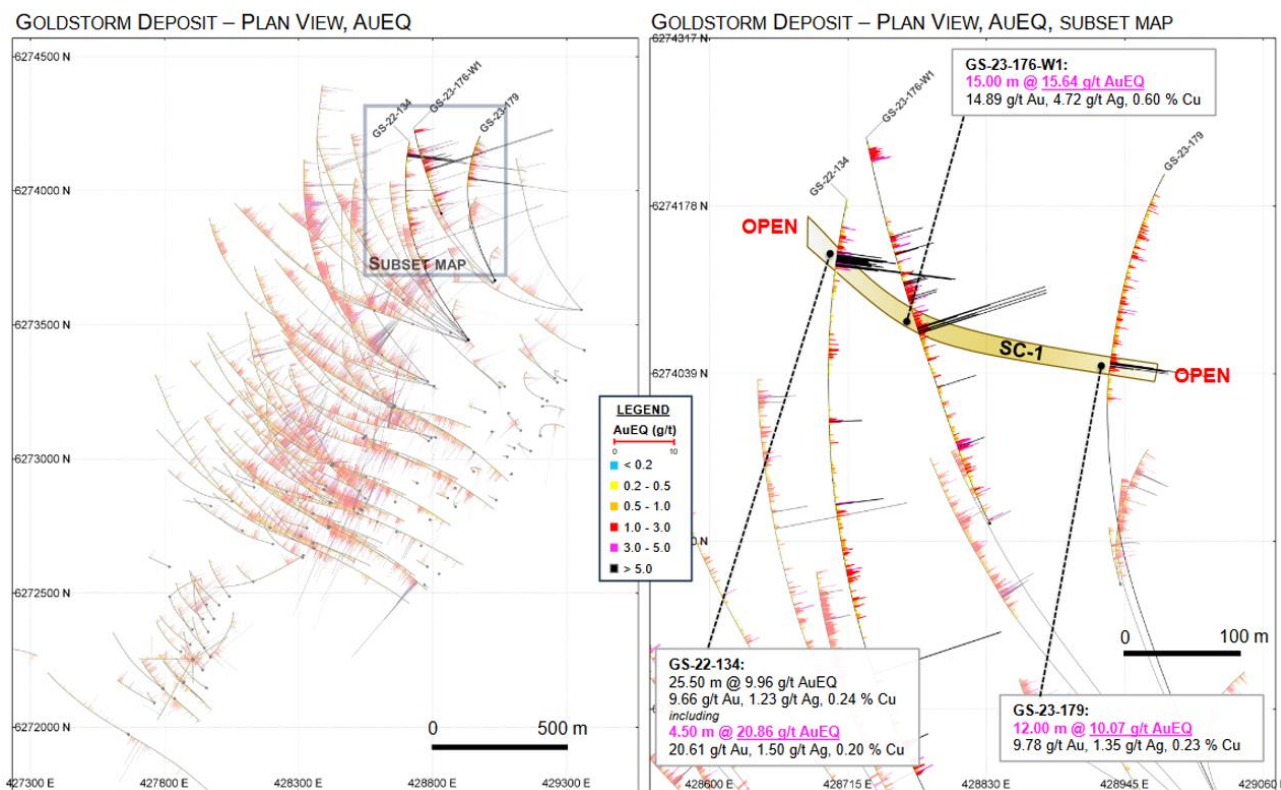

Source: Tudor Gold

Furthermore, wherever possible, targeted definition drilling within the current resource will convert Inferred Mineral Resources to Measured and Indicated Mineral Resources, which would add additional fat ounces to Goldstorm's record potential. Furthermore, an even higher mineral resource as well as new high-grade discoveries would catapult the economic value of the nearly 18,000-hectare Treaty Creek project, in which **Tudor Gold (WKN: A3D078)** holds a 60% interest, straight to the next level.

Supercell discovery extends Goldstorm super successful!

Drilling in the previously identified high-grade gold system Supercell One (SC-1) already delivered outstanding results in 2022 and 2023. Drill hole GS-22-134 returned a sensational **9.96 g/t AuEq** (9.66 g/t Au, 1.23 g/t Ag, 0.24 % Cu) **over 25.5 m**, while GS-23-176-W1 returned a terrific **15.64 g/t AuEq** (14.89 g/t Au, 4.72 g/t Ag, 0.60% Cu) **over 15 m** and GS-23-179 returned a whopping **10.07 g/t AuEq** (9.78 g/t Au, 1.35 g/t Ag, 0.23% Cu) **over 12 m**.

Quelle: Tudor Gold

In addition to the 1A results, the "glorious three" also provided the first-class insight that the drilling intersected a structural corridor with significant quartz-sulphide breccias. To date, the high-grade system has been traced over 400m down plunge and over 300m along a north-eastern axis, while the true width of the mineralized structure has yet to be defined. We are all the more excited to see what great results the step-out and infill drilling currently underway at Supercell will deliver in the near future.

Skeena Resources: The game changer in British Columbia's Golden Triangle!

Skeena Resources has achieved a huge breakthrough in mining in the Golden Triangle. A gigantic financing agreement worth 750 million US dollars catapults the Eskay Creek gold-silver project directly into the fast lane towards production and impressively proves that the Golden Triangle of British Columbia is by no means too difficult for successful mining projects. Skeena plans to start production as early as 2027, silencing the critics.

This success is not only a triumph for Skeena and the region, but also sends a strong signal to other players in the region, particularly **Tudor Gold (WKN: A3D078)**. With its smart strategic planning and the support of strong partnerships, such as the Tahltan Nation, Tudor faces a golden future just like Skeena. These extremely positive developments reinforce confidence in the region and in companies like Tudor Gold, which already boasts the most significant gold discovery in the past 30 years.

This latest development is an eye-opener to the enormous potential of the region and promises a bright future for all involved. Skeena has paved the way, and **Tudor Gold (WKN: A3D078)** stands ready to follow this shining example. The future of gold mining in British Columbia's Golden Triangle now shines brighter than ever!

Conclusion: On the direct path to a future central gold supplier!

The price of an ounce of gold remains on a robust growth trajectory, fueled above all by the increasingly strong signs of an interest rate cut by the Fed in the second half of 2024. At the same time, a recent survey of central banks by the World Gold Council revealed that 29%, or almost a third of them, expect to increase their gold reserves in the next twelve months. This, in turn, is the highest figure ever recorded since the survey began six years ago.

GOLDHUB

Chart 4: How do you expect your institution's gold reserves to change over the next 12 months?

2024 Base: All central banks (69); Advanced economy (24); EMDE (45). "Don't know" was removed as a option from the 2023 survey onwards.

Source: World Gold Council 2024 Central Bank Gold Reserves Survey

The shares of gold producers and exploration companies still lag far behind the gold price in terms of performance, which is why this asset class in particular still has plenty of room for improvement if it is to match the performance of physical gold alone.

Tudor Gold (WKN: A3D078), which is set to make history with its Goldstorm discovery in the middle of the rich Golden Triangle, is undoubtedly best placed to do so. This is all the more true as Ken Konkin, CEO of the gold market breakthrough, is a visionary with a golden nose at the helm of the company, who has decades of experience in precisely this Canadian gold hotspot. In addition, Konkin has profound knowledge of the geological and mineralogical potential of the region and has also established a new quality of dialog and cooperation with the local community to build long-term partnerships and for the benefit of sustainable, socio-economic development of the entire region, from which **Tudor Gold (WKN: A3D078)** will of course also benefit massively.

**Best wishes and maximum success with your investments,
Yours
Jörg Schulte**

Risk warnings and disclaimer: We expressly point out that we accept no liability for the content of external links. Every investment in securities is subject to risks. Political, economic or other changes can lead to considerable price losses. This applies in particular to investments in (foreign) second-line stocks and in small and microcap companies; due to their low market capitalization, investments in such securities are highly speculative and entail an extremely high risk, including the total loss of the invested capital. In addition, some of the shares presented by JS Research GmbH are subject to currency risks. The background information, market assessments and securities analyses published by JS Research GmbH for German-speaking countries have been prepared in compliance with Austrian and German capital market regulations and are therefore intended exclusively for capital market participants in the Republic of Austria and the Federal Republic of Germany; other foreign capital market regulations have not been taken into account and do not apply in any way. The publications of JS Research GmbH are for information purposes only and expressly do not constitute a financial analysis, but are promotional texts of a purely advertising nature for the companies discussed, which pay a fee for this.

No advisory contract is concluded between the reader and the authors or the publisher through the subscription of JS Research GmbH publications. All information and analyses do not constitute an invitation, offer or recommendation to buy or sell investment instruments or for other transactions. Any investment in shares, bonds, options or other financial products is subject to risks, some of which are considerable. The publisher and authors of the JS Research GmbH publications are not professional investment advisors!!! It is therefore essential that you always seek advice from a qualified professional (e.g. your bank or a qualified advisor you trust) when making investment decisions. All information and data published by JS Research GmbH originate from sources that we consider to be reliable and trustworthy at the time of preparation. However, no guarantee can be given with regard to the correctness and completeness of this information and data. The same applies to the evaluations and statements contained in the analyses and market assessments of JS Research GmbH. These have been prepared with due care. No responsibility or liability is accepted for the accuracy and completeness of the information contained in this publication. All statements of opinion reflect the current assessment of the authors, which may change at any time without prior notice. No guarantee or liability is expressly assumed that the price or profit developments forecast in the publications of JS Research GmbH will occur.

Conflict of interest disclosures: The editors and responsible authors hereby declare that the following conflicts of interest exist with respect to the company discussed in this publication, Tudor Gold, at the time of publication: I. Authors and the publisher and related consultants and principals do not hold any equity positions in the aforementioned companies at the time of publication, but reserve the right to buy and sell shares at any time and without notice. II. At the time of publication, authors or the publisher or the client as well as related consultants do not have a direct consulting mandate with Tudor Gold, but receive a fee from the company for reporting. III. authors and the publisher do not know whether other market letters, media or research firms are discussing Tudor Gold shares during the same period, which is why symmetrical information and opinion generation may occur during this period. IV. This publication by JS Research GmbH is expressly not a financial analysis, but a publication of a very clear and unambiguous advertising character on behalf of the company discussed and is therefore to be understood as an advertisement/marketing communication.

In accordance with §85 WpHG, I would like to point out that Jörg Schulte, JS Research GmbH or employees of the company do not hold any shares in Tudor Gold but can enter into their own transactions in the company's shares (e.g. long or short positions) at any time. We expressly point out a conflict of interest. This also applies to options and derivatives based on these securities. The resulting transactions may possibly influence the respective share price of the company. The information, recommendations, interviews and company presentations published on the "Websites", the newsletter or the research reports are paid for by the respective companies. JS Research GmbH or its employees may be compensated directly or indirectly for the preparation, electronic distribution and other services by the company discussed. Although we prepare each article to the best of our knowledge and belief, we advise you to consult other external sources, such as your bank or a trusted advisor, when making investment decisions. We therefore categorically exclude any liability for financial losses that may result from using the information provided here for your own investment decisions. Particularly in the case of commodity and

exploration stocks and small-cap stocks, the proportion of individual shares in the portfolio should only be sufficient to ensure that the overall portfolio can only lose a marginal amount of value even in the event of a total loss. Shares with a low market capitalization (so-called "small caps") and exploration stocks in particular, as well as all listed securities in general, are subject to considerable fluctuations in some cases. The liquidity of securities can be correspondingly low. When investing in the commodities sector (exploration companies, commodity producers, companies developing commodity projects), additional risks must be taken into account. The following are some examples of specific risks in the commodities sector: country risks, currency fluctuations, natural disasters and storms (e.g. floods, storms), changes in the legal situation (e.g. export and import bans, punitive tariffs, ban on raw material extraction or exploration, nationalization of projects), environmental regulations (e.g. higher costs for environmental protection, designation of new environmental protection areas, ban on various mining methods), fluctuations in commodity prices and considerable exploration risks.

Disclaimer: All information published in this article is based on careful research.
